

Engkanto Clash Architecture Diagrams

1. High-Level Architecture

Figure 1: High-level architecture of Engkanto Clash.

2. Multiplayer Gameplay Message Flow

Figure 2: Client input is sent to the server; server snapshots are rendered by the client.

3. Lobby And Chat Communication

Figure 3: Lobby and chat messages synchronize character selection, readiness, countdown, and chat.

4. Server-Side Responsibilities

Figure 4: The server owns multiplayer authority and broadcasts official state.

5. Client Gameplay Rendering

Figure 5: GamePanel switches between local simulation and multiplayer snapshot rendering.

6. Local Character And Combat Structure

Figure 6: Local combat uses character definitions, animation, damage, health, and projectiles.

7. One-Sentence Mental Model

Clients send intent. The server sends truth. Shared DTOs define the contract. Rendering turns snapshots into visuals.
